MARKETING OPERATIONS · YEAR-TO-DATE REVIEW

Marketing Performance & Pipeline

$2.28M NEW-BUSINESS WON YTD
27 DEALS, ALL SOURCES

Where 2026's new-business revenue actually came from, what marketing contributed to it, and the qualified demand being generated faster than it is being worked. All figures pulled live from HubSpot, reconciled against the deal record.

PERIOD · **Jan 1 – Jul 20, 2026**

SOURCE · **HubSpot portal 242825734 (live)**

PREPARED BY · **Marketing (Dillon Mohr)**

01 AT A GLANCE

The year in eight numbers

Three lenses on the same year: the revenue the business closed, the honest slice marketing originated, and the qualified demand marketing is producing. Everything downstream ties to these.

Note on this version: an earlier draft used the $162K / 8-engagement figures from a design-review one-pager, which its own methodology labeled as representative placeholder data. Those did not match the CRM. Every number here is pulled live from the HubSpot deal record on Jul 20 and supersedes that draft.

$2.28M NEW-BUSINESS WON 27 deals	**$4.95M** TOTAL CLOSED-WON 104 deals, all types	**$195K** MARKETING-SOURCED WON web-originated, 8.5%	**$140K** INFLUENCED OPEN PIPELINE live, Organic Search
14,326 SITE VISITS YTD ~2,200 / month	**1.97%** VISIT-TO-LEAD RATE 282 form submissions	**13** SUPER-QUALIFIED BUYERS 12 produced $0	**40%** LEADS NEVER WORKED 70 of 177, no outreach

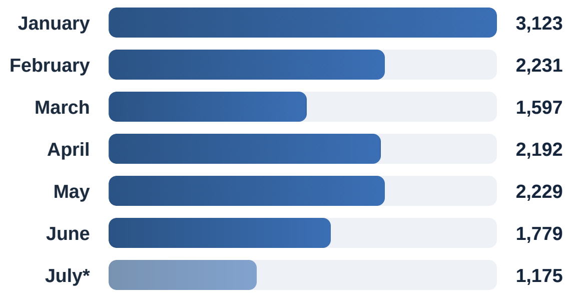
Marketing is not yet a primary revenue-*origination* channel: 90% of new-business revenue is partner, sales, and outbound sourced, and marketing can cleanly claim about **$195K of web-originated new business (8.5%)**. Where marketing genuinely earns its keep is **demand quality and influence**: it touched **$738K** of won revenue along the way, is feeding **$140K of fresh pipeline** right now, and generates named, high-fit buyers every month. The problem is what happens next: **40% of the people who raise their hand are never contacted**.

What the website is producing

Monthly traffic and the rate it converts to a lead, both from HubSpot's own tracking so the ratio is internally consistent. No Google Analytics dependency.

Monthly site visits

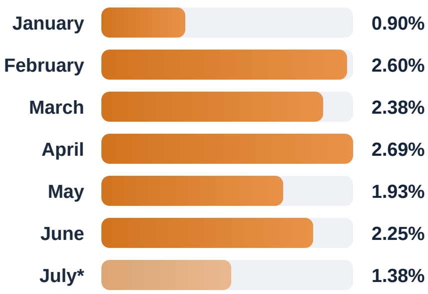
14,326



*July through the 20th. Completed months average ~2,200 visits.

Visit-to-lead rate

1.97%



Peaked at 2.7% in April. Below 1.2% on a full month now triggers an alert.

Working

The Contact page converts roughly 1 in 4 visitors. Buyer's-guide posts hold readers 5 to 16 minutes. Meeting-scheduler links are the strongest booking path.

Opportunity

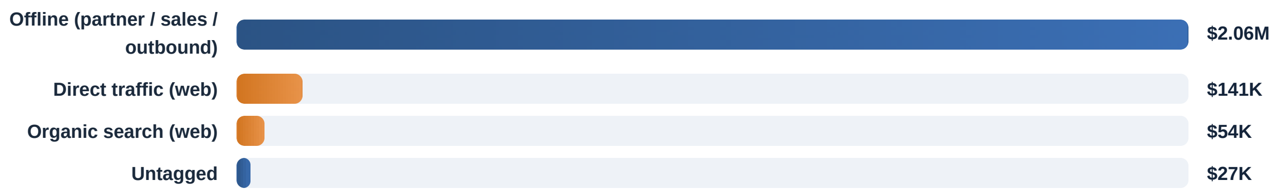
The blog earns ~3,900 views but has produced only 2 form fills all year. A guide-download CTA on each buyer's guide is the highest-leverage on-site fix.

How new-business revenue originated

Of $2.28M in new-business won, 90% traces to offline origination (partner, sales, outbound). Marketing's web-originated share is $195K. Reported in honest layers so nothing is over-claimed.

New-business won by origin

$2.28M



Web-originated (orange) = $195K, 8.5% of new business. Of that, only the $54K Organic Search win (Weissman) is independently source-verified; the $141K Direct deal's origin is disputed in the CRM.

Reading marketing's contribution honestly

Originated (verified): $54K, the one new-business win we can unambiguously tie to organic search.

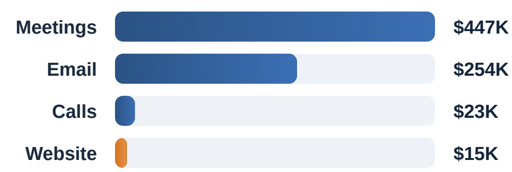
Web-sourced (broad): $195K including a source-disputed direct deal.

Influenced (LINEAR touch): $738K of won revenue was *touched* by a marketing asset along the way. Influence, not origination, and never added to the above.

Not marketing: 90% of new business is partner / sales / outbound, credited to those channels.

Marketing touch-influence

$738K



HubSpot LINEAR attribution. The website directly influenced only 1 deal all year, the clearest case for the on-site fixes in section 02.

Marketing gets them in the door. They die downstream.

Every deal this year whose origin traces to the website (Organic Search, Direct). The at-bats are real and large. The losses are happening inside the sales process, and are almost entirely undocumented.

DEAL	SOURCE	AMOUNT	STATUS	NOTE
Weissman SmartCare Optimization	Organic Search	$54K	WON	Verified organic win
BioScript SmartCare	Direct	$141K	WON	Origin disputed in CRM
Kaiser Permanente PRO Optimization	Organic Search	$125K	OPEN	Expressing interest, Sep 30
RPM / Bedrock SmartCare Services	Organic Search	$15K	OPEN	Proposal / quote
Americold Logistics Dayforce WFM	Direct	$800K	LOST	No reason logged
Superior Propane Dayforce SmartCare	Organic Search	$200K	LOST?	Close date future-dated
Koroseal HCM/WFM Launch	Organic Search	$100K	LOST	No reason logged
Eat'n Park UTA to Pro WFM	Direct	n/a	LOST?	No amount, closed Jul 17
Tahoe Transportation Managed Services	Organic Search	$0	LOST	No reason logged

~$1.1M lost, zero documented reasons

Five web-sourced deals were marked lost, including an $800K and a $200K. Not one has a loss reason recorded. Across the whole company, 72 of 72 lost deals this year have no reason logged.

Two look prematurely closed

Superior Propane ($200K) is marked lost with a close date **two weeks in the future**; Eat'n Park was closed with **no amount entered**. Both may still be workable.

05 QUALIFIED DEMAND AT RISK

The hottest leads of the year, and what happened to them

Thirteen buyer-qualified inbound buyers scored 90+ (Hot fit). Twelve produced zero revenue. This is the highest-value idle asset in the business, and it is marketing's strongest argument for its own value.

SCORE	COMPANY	WHAT THEY ASKED FOR	STATUS
99	**Eat'n Park Hospitality**	10,000+ employee UKG UTA→Pro WFM migration	LOST no reason
99	**INDOCHINO**	Cross-border UKG Pro/WFM stabilization backlog	NEVER WORKED
98	**Therapeutic Associates PT**	CPO: immediate daily Dayforce leave coverage	NEVER WORKED
97	**Tourism Holdings Ltd**	Global legislative-compliance payroll audit quote	NEVER WORKED
94	**Wisq**	Immediate Dayforce integration architecture	NEVER WORKED
94	**Crane NXT**	Enterprise HCM RFP and consolidation	STALLED
93	**Koroseal**	Active 4-platform HRIS RFP	LOST no reason
92	**Kaiser Permanente**	UKG Pro optimization + PM estimate	REVIVED $125K open
90	**Superior Propane**	1,500+ employee Dayforce RFI	LOST? premature

Top 9 of 13 shown. Also: LightSwitch (96), Shield AI (94), Tahoe (91), Monster Energy (90). **Never worked** = qualified, zero outreach ever logged. **Stalled** = contacted, no opportunity opened, not lost.

40% of hand-raisers never contacted

Of 177 form-submitting contacts this year, 70 have zero logged sales outreach. Among the buyer-qualified, 9 of 22. A converted contact nobody touches is marketing spend on the floor.

Most are still recoverable

Only 3 to 4 of the 13 are cleanly, documentably lost. Four hot buyers were never contacted; three stalled with no "no" on record; Kaiser already bounced back to a live $125K deal. Roughly 10 of 13 are still in play today.

06 SYSTEM & NEXT STEPS

What is now automated, and what needs a decision

The measurement gaps are closed and permanent. A daily watchdog and a live, Google-free dashboard now track all of this and alert on it. Three actions remain that only a person can take.

Now measured automatically (daily)

Site health and SEO · verified vs influenced revenue attribution · AI-search (AEO) visibility · **three leading indicators**: visit-to-lead conversion, marketing-influenced open pipeline, lead follow-up gap · **data-integrity alerts** on any deal closed lost with no reason. All on a live dashboard, no Google Analytics.

AI search readiness (AEO)

The site was silently blocking every AI crawler (ChatGPT, Perplexity, Claude, Copilot). That is now fixed and monitored, with an llms.txt guide published. Current AI-referred contacts: 2, all ChatGPT. Baseline for a channel HCM buyers increasingly use.

1	**Re-engage four never-contacted hot buyers** SALES INDOCHINO, Therapeutic Associates, Tourism Holdings, Wisq. Named, high-fit, sitting cold. Drafts ready on request.
2	**Reopen the two premature closes** SALES OPS Confirm Superior Propane ($200K, future close date) and Eat'n Park (no amount) are genuinely dead. If not, back into pipeline today.
3	**Make "closed-lost reason" a required field** HUBSPOT ADMIN 72 of 72 lost deals this year have no reason. A 3-minute settings change makes next quarter's losses explainable from data.
