REPORT STATUS

Organic SEO work active; Google Ads account readback shows no July delivery

JULY SIGNAL

July completed a 12-page Boos & Booze SEO program across confirmed live event pages, with 11 support-module updates fully verified and Portland retaining verified metadata pending an Elementor-specific body update.

What moved in July

VERIFIED WORK

- Optimized 12 existing Boos & Booze event pages across metadata, supporting copy, quick facts, FAQs, and internal links.
- Fully verified support-module updates on 11 pages; Portland retained verified AIOSEO metadata but needs an Elementor-specific body update.
- Verified two genuinely new July event listings: Beltline Bubbles & Bites and Alpharetta Bubbles & Bites, without claiming team authorship.
- Rebuilt the July SEO audit from live WordPress records and separated the organic program from the Google Ads account's no-delivery state.

Primary goal

NEXT DECISION

Carry the verified 12-page program into Elementor completion, schema correction, internal-link QA, and event-level analytics without confusing page optimization with page creation.

Source observed through

August 2, 2026

EXECUTIVE ANALYSIS

July delivered substantially more than an inventory audit. Twelve existing Boos & Booze event pages were optimized across their SEO titles and descriptions, supporting copy, quick facts, FAQs, and internal links to the related event, city, and hub pages.

The work also corrected the operating source of truth after an earlier city-list mismatch. Live WordPress event records and the Boos & Booze inventory now outrank assumed city lists, while page creation, page optimization, Google Ads delivery, and ticket outcomes remain separately labeled.

Platform evidence

Google, Meta, and other operating surfaces stay separate.

Google Ads

Verified · account overview readback

The selected account overview recorded 0 impressions, 0 clicks, and \$0.00 spend for July 1–31. Conversion reporting is pending validation; the account readback is not used as evidence of organic search performance.

Spend	Impressions	Clicks	CTR
\$0.00	0	0	0.00%

Workstream / campaign	State	Spend / scope	Delivery	Signal
Google account overview	No July delivery recorded	\$0.00	0	0 clicks
Organic search	Active work	—	—	Inventory-led

WordPress SEO

July work completed

The organic lane now follows the live page and event inventory. That boundary prevents metadata and content work from drifting into unsupported pages.

Priority pages	Metadata	Schema	Event source
Mapped	Reviewed	Reviewed	Live inventory

Workstream / campaign	State	Spend / scope	Delivery	Signal
Event pages	Confirmed	—	—	Optimize only live pages
City pages	Inventory check	—	—	Contract alignment

Freshness and interpretation: Organic SEO work active; Google Ads account readback shows no July delivery. Counts and values are reproduced only where the source names the period and scope; missing fields remain pending.

Outcomes and measurement

Google conversion events count as leads; qualified business outcomes remain separate.

Lead accounting: Google Ads conversion events are counted as leads in this client-facing package. Lead counts are shown as whole integers; when Google reports fractional attribution, the display rounds to the nearest whole lead and preserves the raw value in the supporting note. Platform leads remain separate from qualified, booked, or revenue outcomes.

Platform signal

Google Ads had 0 July delivery in the selected account overview; this is a delivery state, not an organic outcome.

Business outcome

Organic rankings, bookings, ticket sales, and revenue were not reconciled in the reviewed July source window.

Measurement state

Conversion reporting is pending validation. Keep organic search and paid account states separate, then connect confirmed events to analytics and ticket outcomes.

Complete July delivery ledger

WORK COMPLETED · WHY IT MATTERS · STATE

Live inventory	Validated the current WordPress event inventory and the Boos & Booze source page.	Prevents SEO work on unsupported cities or stale events.	Verified
Page optimization	Worked 12 existing Halloween event pages across approved live markets.	Exceeded the signed monthly range of 5 to 10 existing-page optimizations.	Complete
Metadata	Improved SEO titles and descriptions on the confirmed event pages.	Strengthens search presentation and page relevance.	Complete
On-page content	Fully verified support-module updates on 11 pages; Portland needs an Elementor-specific body update.	Keeps completion state exact while preserving verified metadata work.	11 verified · 1 carryover
Internal links	Connected event pages, city pages, and the Boos & Booze hub.	Improves crawl paths and event discovery.	Complete
SEO audit	Rebuilt the July WordPress SEO audit after fresh live-record validation.	Replaced the earlier city-list mismatch with verified inventory.	Delivered
Schema review	Identified the Birmingham 2065 year and Atlanta state inconsistencies.	Surfaces structured-data defects that can confuse search engines.	Open
New inventory	Verified two July-created event listings: Beltline Bubbles & Bites and Alpharetta Bubbles & Bites.	Publication is verified; team authorship is not claimed without CMS evidence.	Verified
Scope control	Confirmed the original ten-page batch belonged to June and the July contract focused on existing-page optimization.	Keeps monthly delivery reporting accurate.	Confirmed

12 existing pages optimized

Boos & Booze July page scope

SEO titles and descriptions, supporting copy, quick facts, FAQs, and internal links were improved across the confirmed live event inventory.

Decisions for August

Three owned next moves, written for action.

Wins

- Twelve existing Halloween event pages moved through a documented SEO program.
- Eleven support-module updates are fully verified and two new July listings are confirmed live.

Watchouts

- Portland requires an Elementor-specific body update even though its metadata is verified.
- The Google account overview recorded no July delivery and does not measure organic demand or ticket sales.
