

PLAN MODE

PLUGINS

CONTEXT

REVIEW GATES

FROM THE 15:43 WORKFLOW WALKTHROUGH

The Account Manager AI Workflow.

A repeatable daily process that gives you back **50–60% of the work you do now** — without letting anything unreviewed reach a client.

Every point from the walkthrough, condensed into one operating loop, one plugin stack and three prompts you can paste in today. You don't have to watch the video. You do have to connect the plugins.

YOUR STACK

INSIDE THIS GUIDE

01 One loop. Every account.

The five stages every AM runs, plus the twenty-minute setup.

02 Connect these. In this order.

The core six, then the module your role actually needs.

03 Three prompts. Paste and go.

Copy-ready prompts and the four rules you never skip.

50–60%

of a typical AM day this one prompt can expedite or automate

6

core plugins everyone connects before adding anything role-specific

\$20/mo

gets most of you roughly 80% of the top plan's capability

20min

to set up the workspace that then works for you every day

— THE OPERATING MODEL • 01

One loop. Every account.

The point of this isn't novelty — it's that every Account Manager runs the **same five stages** in the same order. Only the connected accounts and the role modules change. Learn the loop once and it works on every client you own.

YOUR FIRST TWENTY MINUTES — do these four things in order

THE MOMENTUM EDGE

You do not need the \$200 plan. **The \$20 plan gets you roughly 80% of the capability** — run the mid-tier model on medium reasoning for daily work and step up to high only when a task genuinely needs the depth. Spend the difference on connecting your stack properly. And once Slack and Gmail have been connected for a week or two, open a new chat and you'll find **the recommendations are already waiting for you** — click one, hit enter, done.

YOUR PLUGIN STACK • 02

Connect these. In this order.

The goal is not to install everything. **Connect the core six first**, prove one low-risk client workflow, then add only the module your role calls for.

TIER 1 • THE CORE SIX — everyone connects these

Gmail

Full-thread context so drafts start from what was actually said — not a blank page.

READ + DRAFT You review recipients and send.

Slack

Internal decisions, blockers and commitments become today's priority list.

READ + DRAFT You approve anything posted.

Sheets & Drive

Briefs, trackers and report inputs pulled from the real source file.

SCOPED Assigned client folders only.

Calendar

Meeting prep and deadline awareness — agendas written before you sit down.

READ FIRST No invite changes unconfirmed.

HubSpot

Contact, deal and activity context for account summaries and follow-up queues.

READ FIRST Review every record change.

Chrome

Browser and computer use for systems with no direct connector.

SUPERVISED Stop before send or submit.

TIER 2 • ADD BY ROLE — only what you're responsible for

Paid Media

Google Ads, Shopping and LinkedIn Ads for pacing, search terms and lead quality. Confirm the account, timezone and conversion definition **first**.

Analytics & SEO

Semrush and Keyword Planner for demand and competitor research. First-party platform data stays the source of truth.

Content & Social

Canva for repeatable social and presentation work. Figma when design collaboration or landing pages are in scope.

Web & Technical

Codex for longer builds and web work. Claude is strong for video editing and web design. Briefs in, staging links out.

Files & Projects

Your AI can be a lightweight personal task list — but shared ownership, due dates and approvals stay in the real system.

Recording & Training

Record the walkthrough once, then have AI cut it, transcribe it and turn it into the SOP. This guide came from a 15:43 Loom.

Hundreds of plugins exist and an **Ads Manager for ChatGPT** is emerging — confirm anything new is approved before you rely on it. Personal integrations are fine, but **keep them separate from client work and client data**.

— REPEATABLE PROCESS • 03

Three prompts. Paste and go.

Copy these as written, swap the brackets for your clients, and save them. The first one does the heavy lifting — it's the prompt behind the 50–60%.

PROMPT 01 • DAILY TRIAGE

Run it first thing, every morning

Act as my Account Manager assistant using the client systems connected here. Review only my assigned clients. Build today's priority queue with the client, the source, the request, the due date, the owner, how fresh the evidence is, the next action, and whether it needs approval. Then draft the top three items. Do not send anything.

PROMPT 02 • CLIENT UPDATE

Personalize the voice, then read it before it goes

Draft a client update for [client] using the last two weeks of email, Slack and CRM activity. Match my voice from my previous sent messages. Lead with what moved, then what needs their decision, then what's next. Flag anything you could not verify as pending rather than guessing.

PROMPT 03 • ROLE ONBOARDING

Run this once, on day one

My role is [role]. Here is what I do day to day: [responsibilities]. Here are my clients and the systems each one uses: [list]. Use Plan Mode to propose the smallest set of integrations I need, a repeatable daily workflow, and the review gates that should never be skipped. Keep it simple enough that I'll actually use it.

FOUR NON-NEGOTIABLES

1 Double-check every client-facing send.

AI can draft the email and the update. It does not get to press send. Personalize the voice, verify the facts and attachments, then send it yourself.

2 Never expose sensitive client information.

If a screen, thread or file holds something a client wouldn't want shared, it does not go into a prompt. When in doubt, close the tab.

3 You stay the person delegating.

Browser and computer use are genuinely powerful. Keep the task bounded, keep the account visible, and stop the run before anything is sent, published or paid.

4 Verify the account before you report.

The most damaging mistake is correct-looking analysis from the wrong client, date range or conversion action. Confirm all three first.

START SMALL, THEN COMPOUND

Do those four things and the rest is upside. It gets more useful the more you use it — better client communication, more work done properly, and time handed back to you. Small wins count: ask it to build you a **personalized HTML email signature** and you'll see the point in about two minutes.

You don't have to watch the video. You do have to connect the plugins.

Start with page 02. Twenty minutes today, then it works for you every day after.
