# HALLOWEEN LANDING PAGES LAUNCH SCORECARD

PREPARED FOR THE BAR CRAWL USA TEAM · AUGUST 27, 2026

All ten pages are live, indexable, locally written, connected to secure Eventbrite checkout, and recorded in the event tracking sheet. The score measures launch readiness. It is not a Google ranking or a promise of position.

# HOW THE SCORE WORKS

A weighted internal readiness model built from current live behavior, content depth, search fundamentals, ticket UX, and measurement status.

|                          |                        |                    |                           |                          |
|--------------------------|------------------------|--------------------|---------------------------|--------------------------|
| 25/25<br>INDEX AND CRAWL | 23/25<br>LOCAL CONTENT | 19/20<br>TICKET UX | 15/15<br>SCHEMA AND LINKS | 10/15<br>MEASUREMENT OPS |
|--------------------------|------------------------|--------------------|---------------------------|--------------------------|

|                        |    |                                                                                                                                     |
|------------------------|----|-------------------------------------------------------------------------------------------------------------------------------------|
| INDEX AND CRAWL        | 25 | HTTP 200, canonical URL, no noindex directive, fresh page sitemap entry, one clear H1, and a descriptive title.                     |
| LOCAL CONTENT          | 23 | Source safe city copy, practical route context, 11 sections, five visible FAQs, verified images, and a distinct local search focus. |
| TICKET EXPERIENCE      | 19 | Visible ticket section, secure Eventbrite modal checkout, correct city event mapping, and separate Cleveland ticket choices.        |
| SCHEMA AND LINKS       | 15 | FAQPage and BreadcrumbList structured data plus official event, city hub, Halloween hub, and local authority links.                 |
| MEASUREMENT OPERATIONS | 10 | Checkout initiation measurement is live. Completed order reconciliation and manual indexing remain access dependent.                |

|               |                                                                                                                                                                                                                                 |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| WHAT 92 MEANS | The page fundamentals are strong enough to publish, crawl, convert, and mature. The final eight points are not visual polish. They belong to organizer side completed order validation and full Search Console indexing access. |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Evidence: current live HTTP and markup verification, August 26 desktop and mobile QA, sitemap readback, production Eventbrite modal test, and Google Sheet readback

# TEN LIVE PAGE SCORES

Every page passed the same technical and mobile gates. Small score differences reflect source completeness and multi-event ticket handling.

|                |    |                                                                                                                                       |
|----------------|----|---------------------------------------------------------------------------------------------------------------------------------------|

Cleveland receives one additional point for handling two separate event dates and ticket choices in one clear guide. Atlanta and Sarasota each retain one source completeness deduction: Midtown has no verified 2026 record yet, and Sarasota does not publish one complete event-wide operating window.

# WHAT SHIPPED ON EVERY PAGE

Five pages use the proven Tacos and Tequila campaign rhythm. Five use distinct layouts while preserving the same search, ticket, and brand standards.

## SEARCH FOUNDATION

- Unique city title and meta description
- One H1 and clean canonical URL
- Indexable status and fresh sitemap entry
- FAQ and breadcrumb structured data

## LOCAL USEFULNESS

- Verified date, district, route, and check-in facts
- Five visible traveler questions
- City hub and Halloween hub links
- Official local planning resource

## CONVERSION PATH

- Visible tickets section
- Secure Eventbrite modal checkout
- Correct city event assignment
- Separate West Park and Lakewood choices

## QUALITY CONTROL

- Desktop and mobile rendering verified
- No horizontal overflow
- No broken loaded images
- No visible dash punctuation in page copy

## PERSONALITY WITHOUT DRIFT

The pages share a clear Bar Crawl USA voice and conversion system, but they do not read like ten duplicated templates. Local district details, route logic, group planning advice, timing, and imagery give each market a real reason to exist.

All ten pages returned HTTP 200 and preserved their title, H1, canonical, FAQ schema, Eventbrite code, and indexable state on August 27.

# TICKET AND MEASUREMENT ARCHITECTURE

The spring setup counted a form submit proxy. This build separates the page click from the completed Eventbrite order so reporting can be reconciled correctly.

## LANDING PAGE

The visitor opens the city guide, reviews the local details, and chooses the correct ticket option.

## CHECKOUT INITIATION

The secure Eventbrite modal opens and the page records `begin_checkout` with city, page, and event identifiers.

## ORDER RECONCILIATION

The completion callback is ready. Organizer side access is still required to validate completed order reporting against real purchases.

## VERIFIED IN PRODUCTION

### 1 live modal

The Atlanta checkout opened the expected Eventbrite event in a secure iframe, and the page data layer recorded the matching checkout initiation.

## IMPLEMENTED ACROSS

### 10 pages

Every city page contains the same measurement contract. Cleveland maps its two ticket choices separately.

## REPORTING LANGUAGE

Checkout initiation is live and verified. Completed purchase reporting remains pending validation until the Bar Crawl USA Eventbrite organization is accessible and a real order can be reconciled end to end.

# RECORDED, SUBMITTED, AND NEXT

---

The page work is complete. The remaining actions depend on account permissions rather than additional landing page production.

## RECORDED

### EVENT TRACKING SHEET UPDATED

READ BACK SUCCESSFULLY

Rows 54 through 63 now contain all ten published pages, live URLs, focus terms, event sources, metadata, and verified ticket and SEO notes.

---

## SUBMITTED

### SITEMAP AND ROBOTS DISCOVERY

CRAWL PATH OPEN

All ten URLs appear in the page sitemap with fresh August 26 timestamps. Search Console accepted a robots recrawl request.

---

## PENDING

### MANUAL INDEXING REQUESTS

OWNER ACCESS NEEDED

The connected Google account can inspect the property but does not have full Search Console access required for manual URL submission.

---

## PENDING

### COMPLETED ORDER RECONCILIATION

ORGANIZER ACCESS  
NEEDED

The Dillon Eventbrite login is valid but currently has no Bar Crawl USA organization or event permissions. Organizer access is needed for purchase validation.

---

## NEXT

### LET THE PAGES MATURE

MEASURE BEFORE REVISING

Protect the live URLs, avoid unnecessary slug changes, monitor index coverage and impressions, and improve only from real query and order evidence.

---

# THE PAGES ARE READY. ACCESS IS THE REMAINING LEVER.
