THE

CREATIVE AUDIT AND OPERATING SYSTEM

IMMOHRTAL Content Upgrade & Production Book

A practical plan to turn a polished campaign into a human-led social growth engine, with a free publishing stack, SEO roadmap, measurement rules, and production briefs for Claude.

DM

PREPARED JULY 15, 2026

IMM

DAN
DELL

Prepared: July 15, 2026

Decision: Keep the visual identity. Rebuild the distribution mix around Dillon's face, voice, music, and real listener proof.

Publishing status: Planning and production only. Nothing has been posted or scheduled externally.

Executive verdict

The social package looks good enough to launch, but it is not yet good enough to scale by itself.

The design system is coherent, premium, and recognizable. The typography, dark editorial palette, waveform language, Split concept, and campaign lines create a real world around the album. The weakness is that too many assets look like campaign packaging rather than native social content. A stranger can admire the design without caring about the person or playing the song.

The upgrade is not a redesign. It is a change in emphasis from roughly 70 percent designed packaging and 30 percent human material to 70 percent human material and 30 percent designed support.

Audit scorecard

Area	Score	Judgment
Brand identity	9/10	Distinctive and consistent enough to recognize without the logo.
Story and positioning	9/10	The CMO becoming a rapper at almost 29 is the strongest acquisition idea.
Static creative quality	8/10	Polished and useful for credibility, carousels, announcements, and retargeting.
Native social fit	6/10	Too many pieces feel like posters or visualizers instead of a person talking to a person.
Hook and retention system	6/10	Good themes exist, but the first two seconds and repeatable variants need to be produced.
Production readiness	6/10	Only 3 of 30 calendar entries are currently marked Ready; most need capture, approval, or edits.
Conversion system	8/10	Website, preview gate, UTMs, EPK, and measurement structure are strong once live IDs and links are added.
SEO and AI discovery foundation	7/10	Metadata, sitemap, robots, blog generation, and structured data exist; query strategy and authority content need expansion.

What stays

- The Split visual world: office by day, booth after hours.
- The lines **The delusion is the point** and **IF NOT NOW, WHEN.**
- The dark editorial art direction, typography, photography, and restrained gold accents.
- The tracklist, EPK, album map, real photos, motion library, and website as trust and conversion assets.
- The repeatable series: Delusion Diary, First Listen, The Split, Making It, and 814/Pittsburgh.

What changes now

1. Put a human opening on discovery posts

Every discovery video should begin with one of four things: Dillon's face, a visible reaction, a specific conflict, or the strongest approved musical moment. Branded motion can enter after the viewer understands why they should care.

Good opening patterns:

- "I spent years marketing everybody else because promoting myself felt embarrassing."
- "I am a CMO, almost 29, and I just made the rap album I kept talking myself out of."
- "This is the exact moment my best friend realized I was serious."
- "Nobody hears Erie when they picture rap. I wanted this record to change that."
- "I need an honest answer: is this brave or completely delusional?"

2. Stop making every post perform the same job

Use one CTA based on the viewer's stage. Do not append the campaign closer to every sentence if it weakens the natural voice.

Funnel stage	Post job	CTA examples
Acquisition	Earn the next second	"Would you keep listening?" or no CTA
Activation	Create participation	"Pick the next track" or "Brave or delusional?"
Retention	Build a returning series	"Part two tomorrow" or "Follow the experiment"
Referral	Give people a person to send it to	"Send this to the friend who keeps waiting"
Revenue/fan action	Move proven interest	"Hear the private preview" or the verified smart link

3. Build proof around the music

The audience needs evidence that the record affects people. Capture Keev, friends, local listeners, musicians, marketers, fathers, and strangers hearing a controlled section for the first time. Keep the camera on the listener longer than the playback edit. Never script the reaction.

4. Make the art native to each platform

- TikTok: blunt hooks, reply videos, rough edges, comments as prompts.
- Instagram Reels: clean captions and covers, emotional proof, collaborative posts, Story follow-through.
- YouTube Shorts: searchable titles, a complete mini-story, and a clear next video.
- LinkedIn: the honest CMO/artist conflict, transparent lessons, and results without turning the album into corporate content.
- Facebook: personal history, Erie and Pittsburgh identity, relationships, and local sharing.

5. Create a real weekly capture constraint

One 60-minute capture session must deliver:

- 10 opening hooks, two takes each.
- 4 complete direct-to-camera stories.
- 2 listener reactions.
- 1 live or stripped performance moment.
- 10 office/studio/notebook/location B-roll clips.
- 1 longer answer for LinkedIn, YouTube, blog, and email repurposing.

Upgraded weekly content mix

- 40 percent direct-to-camera confession or story.
- 20 percent music performance or first-listen reaction.
- 15 percent process, notebook, studio, and location footage.
- 15 percent carousel, photo, quote, or designed asset.
- 10 percent live, poll, comment reply, or community decision.

Publish four strong vertical videos, two feed support posts, daily Story frames, one live touchpoint, and one deeper text post per week. Quality and learning matter more than filling every slot.

Creative testing system

Each core story gets three controlled variants:

1. Conflict first: the uncomfortable truth in the first sentence.
2. Proof first: reaction, lyric, location, or visual evidence before explanation.
3. Question first: a polarizing but honest audience decision.

Change only one major variable per variant. Log the hook, length, music section, CTA, and distribution platform. Evaluate after comparable reach rather than declaring a winner from one early spike.

Promote only posts that combine strong retention with a meaningful downstream action. Views alone are not a scaling signal.

Free publishing stack decision

Recommended now: Buffer Free

Connect Instagram, TikTok, and YouTube Shorts. Buffer Free currently allows three channels and ten queued posts per channel, with slots refilling as posts publish. That is enough to keep a rolling seven-to-ten-day launch queue without

paying for a tool.

Use Buffer for:

- Approved evergreen Reels, TikToks, and Shorts.
- Carousels and static support posts when the format is supported.
- Drafting and queue visibility.
- Basic analytics and comment triage.
- Consistent UTM-tagged links.

Post natively for:

- Trending or licensed audio selection.
- Instagram Story polls, question stickers, links, and Lives.
- Instagram Collab invitations and sensitive music tagging.
- TikTok reply videos, stitches, duets, and trend-dependent posts.
- Posts whose final cover, caption placement, or sound must be inspected in the app.

Why not the other free plans as the primary tool

Tool	Free-plan fit	Decision
Buffer	3 channels; 10 queued per channel; supports Instagram, TikTok, and YouTube Shorts	Best single free publisher for this launch.
Metricool	1 brand; 20 posts per month; LinkedIn and X excluded; stronger free competitor and analytics view	Useful as a secondary research dashboard, but the monthly publishing cap is below the campaign cadence.
Publer	3 accounts; 10 queued per account; X excluded; only 24 hours of published-post history	Capable alternative, but weaker historical visibility for a measurement-led launch.
Meta Business Suite	Native Facebook Page scheduling and Meta account management	Best free native companion for Facebook and Instagram-specific features, not the cross-platform system of record.

Operating rhythm

- Monday: approve and load the next seven days.
- Daily: inspect the next post, add native sound/features if needed, and answer comments.
- Friday: export platform results into `IMMOHRTAL_WEEKLY_SCORECARD.csv`.
- Sunday: choose two winners to multiply, one post to repackage, and one idea to stop.

SEO and AI-discovery upgrade

The site already has a useful technical base. The next gain comes from building the query and authority layer around real stories rather than publishing generic music blogs.

Priority query clusters

1. IMMOHRTAL, Dillon Mohr, Dance With The Delusional, and individual track names.
2. Erie rapper, 814 hip-hop, Pittsburgh independent rapper, and Pennsylvania hip-hop.
3. CMO rapper, marketing executive makes rap album, and starting music at 29.
4. Independent album making, first release process, and balancing creative work with a career and fatherhood.
5. King Keesx collaborations and approved Mac Miller influence context without implying affiliation.

Pages and articles to create

- A definitive artist/about page with a concise fact block and named author.
- One page per released track with story, credits, approved lyrics excerpt, audio, and FAQ.
- "Why a CMO made a rap album at 29."
- "From Erie to Pittsburgh: the 814 story behind the record."
- "How Dance With The Delusional was made."
- A transparent release experiment page updated with real results.
- Press mentions and interviews consolidated into an authority page.

Add relevant MusicAlbum, MusicRecording, Person, Article, FAQPage, and Breadcrumb structured data only when the visible page supports it. Keep artist naming, bios, links, locations, collaborators, and release facts consistent everywhere. Do not generate fake reviews, invented quotes, or unapproved lyrics.

90-day roadmap

Days 1 to 14: activation

- Verify handles, links, release state, analytics IDs, and the email path.
- Capture the first 20 human-led clips and two reaction sessions.
- Connect Buffer to Instagram, TikTok, and YouTube Shorts.
- Load only the first seven days so the content can react to results.
- Publish the artist definition page and one cornerstone origin article.

Days 15 to 30: acquisition learning

- Test three hooks for each of the four strongest stories.
- Identify the two story pillars and two music moments that create qualified action.
- Turn substantive comments into reply videos.
- Begin local press and creator outreach with the EPK.
- Correct and approve any lyric sections used in public content.

Days 31 to 60: retention and referral

- Turn the winning idea into a named weekly series.
- Run weekly listener-choice and first-listen formats.
- Publish two track-story pages and two deeper articles.
- Build a referral moment for email subscribers and early listeners.
- Start small paid tests only on proven organic posts with verified tracking.

Days 61 to 90: scale

- Repurpose winners into new hooks, audiences, and formats.
- Expand creator, local media, college radio, and marketing-trade outreach.
- Build retargeting audiences from qualified viewers and site actions.
- Use release and audience data to choose the next single and content emphasis.
- Review whether Buffer's paid tier is justified by time saved and reporting needs; do not upgrade merely to hold more posts.

Measurement and decisions

Track by platform and content ID:

- Three-second hold or chose-to-view rate.
- Average watch time and completion rate.
- Saves and shares per reached viewer.
- Profile visits and follows.
- Site clicks, preview plays, gate opens, and confirmed signups.
- Verified pre-save or DSP clicks once those links exist.
- Comment quality and recurring audience names.
- Production time and any paid cost, including editing and creator fees.

Use the account's own four-week history as the first benchmark. Use multiple attribution views once paid activity exists: platform-reported, last-click web analytics, and blended spend-to-fan-action. Never mix incompatible windows into one claimed truth.

Decisions Dillon must still make

- Lead single and confirmed release date.
- Distributor and verified smart-link or pre-save URL.
- Primary geographic emphasis beyond Erie, Pittsburgh, and Pennsylvania.
- Initial paid testing budget, if any.
- Whether LinkedIn is a core fourth channel or a manual weekly channel.

- Which lyrics and music excerpts are approved for public use.

Immediate next actions

1. Record the first weekly capture batch from `IMMOHRTAL_WEEKLY_CAPTURE_HANDOFF.md`.
2. Create a free Buffer account and connect Instagram, TikTok, and YouTube Shorts.
3. Load the first seven days, leaving trend-dependent and interactive posts native.
4. Use the Claude production briefs to generate scripts and variants from verified source material.
5. Review results every Friday and update the calendar based on evidence, not preference.

IMMOHRTAL Claude Production Briefs

Purpose: Give Claude bounded, fact-safe production jobs that turn the existing brand system into human-led social content, SEO assets, outreach, and weekly analysis.

Source hierarchy

Claude must read these before producing copy:

1. `02_Campaigns/IMMOHRTAL/IMMOHRTAL Brand Direction.md`
2. `02_Campaigns/IMMOHRTAL/Entity Pack.md`
3. `02_Campaigns/IMMOHRTAL/Social/Content Playbook.md`
4. Approved track notes and corrected transcripts only
5. `IMMOHRTAL_CONTENT_UPGRADE_PLAN.md`

If sources conflict, stop and flag the conflict. Never invent a biography detail, release date, quote, lyric, achievement, stream count, review, press mention, collaborator approval, or link.

Brief 1: 30 direct-to-camera scripts

Create 30 scripts, each 20 to 45 seconds, across Delusion Diary, The Split, Making It, 814/Pittsburgh, First Listen setup, and Audience Verdict. Every script needs:

- A spoken first sentence under 12 words.
- A specific personal fact or tension.
- A complete thought, not a teaser with no payoff.
- One optional natural CTA.
- Two alternate hooks that change only the opening.
- A simple shot note and B-roll suggestion.
- A platform recommendation.

Write in Dillon's sincere, self-aware voice. Confess rather than promote. Avoid marketing jargon, motivational clichés, fake vulnerability, and repeated use of **IF NOT NOW, WHEN**.

Brief 2: hook laboratory

For each of the ten strongest source stories, create three hook families:

- Conflict first.
- Proof first.
- Question first.

Score each hook for specificity, curiosity, emotional stakes, ease of saying aloud, and risk of sounding manufactured. Recommend one test order, but preserve every variant for controlled testing.

Brief 3: track-story system

For each track with verified notes, create:

- A 100-word story card.
- A 30-second spoken explanation.
- A seven-slide carousel outline.
- Three non-lyric discussion questions.
- One search-friendly page outline.
- One press or playlist-context paragraph.

Any lyric excerpt must be copied only from a corrected, approved source and marked for final human approval.

Brief 4: first-listen production pack

Create eight unscripted reaction-session setups with:

- Who to invite and why that perspective matters.
- The neutral pre-listen question.
- The camera and audio setup.
- The music segment to use, marked pending approval.
- Three post-listen follow-ups that do not lead the witness.
- A 15-second, 30-second, and 45-second edit map.

Do not write reactions for the listener or ask anyone to pretend surprise.

Brief 5: native caption bank

Create platform-specific captions for the approved 30-day calendar:

- TikTok: conversational and minimal.
- Instagram: concise context plus one action.
- YouTube Shorts: a searchable title and description.
- LinkedIn: a complete honest observation, not a sales post.
- Facebook: personal and locally shareable.

Use one CTA at most. Include a UTM content ID field. Flag any post that depends on an unverified link, date, lyric, number, or platform feature.

Brief 6: SEO and AI-discovery cluster

Create a prioritized 12-page content map across branded/entity, Erie/814, Pittsburgh, CMO-to-rapper, independent album process, and individual track topics. For every page provide:

- Primary search intent and audience question.
- Proposed title, slug, definition block, and page outline.
- First-party facts or media required.
- Internal links and conversion action.
- Appropriate schema type based on visible content.
- A reason the page deserves to exist beyond ranking.

Avoid generic keyword filler and mass-produced location pages. Recommend FAQ content only for questions the page actually answers.

Brief 7: authority and press kit expansion

Create:

- One 80-word bio, one 200-word bio, and one full narrative bio.
- Erie/814, Pittsburgh, independent hip-hop, and marketing-trade pitch angles.
- Six personalized pitch-email frameworks.
- A press FAQ and interview question bank.
- A fact sheet with every field traced to the source file.
- A press-mention log template.

Do not claim coverage, reviews, charting, awards, or audience size that is not verified.

Brief 8: creator and community outreach

Design a qualification rubric and message framework for:

- Erie and Pittsburgh creators.
- Independent hip-hop reviewers.
- Marketing creators interested in the CMO/artist story.
- College radio and local podcasts.
- Fathers and late-starting creatives with authentic audience overlap.

Claude may create templates, research criteria, and personalization fields. It must not invent a contact list or pretend a creator has been researched without live evidence.

Brief 9: comment and community playbook

Create a response bank organized by praise, honest criticism, lyric questions, production questions, late-starting creatives, local identity, collaborator questions, and trolling. Responses must sound like a person and lead to conversation rather than paste the same campaign line.

Also create 25 audience questions that can become polls, Story stickers, reply videos, or live-session prompts.

Brief 10: weekly analytics memo

Given exported platform data and `IMMOHTAL_WEEKLY_SCORECARD.csv`, produce a one-page memo with:

- Confirmed facts and reporting window.
- Top two posts and the likely causal pattern.
- One post to repackage and why.

- One idea to stop.
- Three controlled tests for next week.
- Funnel movement from reach to confirmed fan action.
- Data gaps and attribution caveats.

Use the account's own history as the benchmark. Separate Instagram, TikTok, YouTube, LinkedIn, and Facebook. Report counts as whole numbers. Do not merge incompatible attribution windows.

Brief 11: long-form repurposing

Turn one approved 10-to-20-minute Dillon interview into:

- One YouTube story outline.
- One first-person blog draft.
- One LinkedIn post.
- Four vertical-video scripts.
- Ten short text posts.
- One subscriber email.
- A list of exact source timestamps for every claim and quotation.

Preserve Dillon's spoken language. Remove repetition without sanitizing the personality.

Brief 12: adversarial quality review

Before delivery, have Claude act as a skeptical fan, platform editor, music journalist, and brand guardian. It should flag:

- Anything generic, overdesigned, self-important, or unclear.
- Hooks that sound written rather than spoken.
- Posts where the campaign line substitutes for a real point.
- Unsupported facts, copied phrasing, or questionable lyric use.
- Repetition across the month.
- A CTA that does not match the viewer's stage.
- A design asset being used where a human clip would be stronger.

Claude should suggest the smallest useful revision and preserve the core voice.

Master prompt

You are the production editor for IMMOHRTAL, Dillon Mohr's independent artist project. Read the required source files before writing. The central story is a CMO who spent years marketing other people and is finally releasing the rap album he kept talking himself out of. The voice is sincere, specific, self-aware, and never generic.

Confess; do not promote.

Use only verified facts from the source hierarchy. Never invent biography, lyrics, dates, links, metrics, praise, reactions, press, or achievements. Mark missing information as PENDING. Lyrics require corrected-source and human approval. Mac Miller can be discussed only as a verified influence, never as an affiliation or endorsement.

Optimize discovery content for a human opening: Dillon's face or voice, visible reaction, specific conflict, or approved music proof in the first two seconds. Designed assets support the story; they are not the story. Use one natural CTA at most. Vary the closer and do not force IF NOT NOW, WHEN into every post.

For each deliverable, include: source facts used, assumptions, approval flags, platform adaptation, content ID, and the metric that would prove the idea worked. Return finished copy plus a short adversarial review.

Recommended production order

1. Direct-to-camera scripts and hook laboratory.
2. First-listen pack and weekly capture batch.
3. Native captions for the first seven days only.
4. Track-story system after lyrics and excerpts are approved.
5. SEO cluster and cornerstone pages.
6. Press and creator outreach after release details are verified.
7. Weekly analytics memo after the first complete reporting window.

No social content has been posted or scheduled externally. Release facts, links, lyrics, and music excerpts require verification and approval.
