VERDICT

Alert fired: form submissions were zero for three consecutive days (Aug 7-9), which trips the 3-day threshold. It is mostly a weekend effect (Aug 8-9) plus one quiet Friday, and today (Monday) is already at 68 views, so this reads as timing rather than a demand collapse, but it warrants a look and I will confirm the streak breaks today. Everything else is healthy: influenced open pipeline ticked up to ~\$564K on a new Direct deal (Dick's Lumber, \$21K), and revenue is unchanged at \$2.88M/33 new business.

ALERTS FIRED

ALERT

Submissions: 0 for 3 consecutive days (Aug 7, 8, 9) [threshold: 3 days]. Aug 3-6 all converted (3, 1, 2, 2 submissions), then Fri-Sun went dry. Friday Aug 7 is the only mildly unusual one (85 views, 0 submissions); Aug 8-9 were low-traffic weekend days. Watch today (Aug 10) to confirm the streak breaks. No other thresholds tripped: WoW views down ~32% (under the 40% alert line, and last week was inflated by the late-July spike), /404 absent, daily views non-zero, conversion above floor.

LEADING INDICATORS & DATA INTEGRITY

Visit-to-lead conversion (July)	1.99%	above floor
Marketing-influenced open pipeline	\$563,674	up from \$542,556
Lead follow-up gap (no outreach)	83/202 = 41%	above 35% threshold
Closed-lost without a reason	87 deals · \$13,881,643	100% of lost

SEO SWEEP (DAILY)

- New page indexed (good):** /ukg/ ("UKG Implementation and Support Partner") now appears in Google's index, a fresh partner landing page. Monitor for tracking + CTA coverage on the next crawl.
- Open, unchanged: legacy apex /news/ still cached in the index, and the /success-stories vs /case-studies duplicate path still needs a canonical decision.

OPEN ISSUES

- hubspot-sitemap-cache-stale-redirects (2 healthy 301s remain in the HubSpot sitemap cache; no private-token sitemap write endpoint)
- duplicate-case-study-path (/success-stories and /case-studies both live and indexed for the same content; pick one canonical path and 301 the other, or set a canonical tag; found in daily SEO sweep 2026-07-23)

- Core commercial pages indexed and titled correctly (home, /about, /careers, /ukg). No /welcome/ legacy URL, no title mismatch. AI crawler access unchanged.

- ga4-invalid-id-in-hubspot (HubSpot GA4 integration field holds G-320235048, an invalid measurement ID firing into a non-existent property; the real live stream is G-0Y6LQTTBRJ; Edge audit 2026-07-30; awaiting Dillon: repoint or uncheck)
- duplicate-ga4-firing (theme includes align-attribution.min.js twice around the global footer, so G-0Y6LQTTBRJ fires twice per pageview; needs a dev to remove one include; Edge audit 2026-07-30)
- cta-form-missing-attribution-fields (footer CTA form e733d928 posts only name/email/phone/company/service_interest/message, so the 33 Align attribution properties sit at ~0% fill; add align_* fields to the payload; Edge audit 2026-07-30)

ONE HIGHEST-LEVERAGE ACTION TODAY

Check that today converts. If Monday Aug 10 ends with a submission the zero streak was just weekend timing; if it also comes up dry with normal traffic, look at the CTA form and GA4 duplicate-firing issues, since a broken form would show exactly this pattern (traffic normal, submissions zero). The standing Kaiser reopen remains the other open action.
